ADP 905/3 WH

Model Version		Page
	ADP 905/3 WH 8542 905 01410	
	Technical data	2 - 3
	Spare part list	4 - 5
	Exploded view	6 - 7
	Circuit diagram	8
	Program diagram	9
	Text/Legend	10 - 16
	Family	Global A5

Technical data

Dimension

Height	85.0	cm
Width	59.5	cm
Depth	59.2	cm
Weight	58.3	kg

Electronic boards

Service boards	see spare part list
Serial boards	
UB	4619 720 80271
CB	096911
Dataset	096901

Succession of programs

Programs	see program diagram
Succession	1a-3b-4b-5a-6a

Program information

Start indicator

Volume (normal program)

Water	Volume	Level
Regeneration	0.3 l	15 mm
Back rinse 3x	1.0 l	68 mm
Prewash	4.8 l	122 mm
Main wash	4.5 l	121 mm
Intermediate rinse 1	4.0 l	120 mm
Intermediate rinse 2	4.0 l	120 mm
Clear rinse	4.0 l	120 mm
Safety / overflow	8.5 l	141 mm

Measuring the level

Remove the coarse sieve, put in a measuring meter into the sump, measure the height of the water level.

Detergent max.

Pre-wash	10	cm ³
Main-wash	45	cm ³
Rinse aid	125	cm ³
6 Dosage steps	1 - 6	ml

Water softener

Saltcontainer	2	kg
Resin container	900	cm ³
Regeneration dosage	300	cm ³

Water pressure

Inlet pressure	0.3-10	bar
Spray pump pressure	0.4	bar

Rotations

Spray pump motor	2800	RPM
Drain pump motor	3000	RPM
Spray arm lower	20 - 40	RPM
Spray arm upper	25 - 35	RPM
Ceiling rotor	45 - 65	RPM

Flow rates / Inlet volume

Flow meter (at 0.3 bar = quantity 1.1 l/min)	208	Imp/l
Spray pump	~ 70	l/min
Drain pump	16	l/min
Pump height max.	1.1	m
Inlet valve	4.5	l/min
Spray arm lower	33	l/min
Sprayarm upper	27	l/min
Ceiling rotor	10	l/min

Electrical data

Base data

Voltage	220/230	V
Frequency	50	Hz
Total power	2.0-2.2	kW
Fuse	10	A

Motor

Spray pump motor

Voltage	220/230	V
Power consumption	160	W
HI	81	Ω
HA	44	Ω
Capacitor	4	μ F

Technical data

Drain pump motor

Voltage	220/240	V
Power consumption	30	W
Resistance	146	Ω

Heating

1 Element system

Voltage	220/230	V
Power consumption	1.87/2.04	kW
Resistance	24.5	Ω
Heating speed	~ 2.0	$^{\circ}\text{C}/\text{min}$
Temperature on surface	~ 115	$^{\circ}\text{C}$
Safety thermostat self reset	85	$^{\circ}\text{C}$

Water valves

Single valve at inlet hose

Voltage	220/240	V
Frequency	50/60	Hz
Resistance	3.76	$\text{k}\Omega$

Regenerating valve

Voltage	220/240	V
Frequency	50/60	Hz
Resistance	3.13	$\text{k}\Omega$

Coil of dispenser

Voltage	220/240	V
Frequency	50/60	Hz
Resistance	1.5	$\text{k}\Omega$

Reedcontact

flow meter

NTC

15 $^{\circ}\text{C}$	75	$\text{k}\Omega$
20 $^{\circ}\text{C}$	62	$\text{k}\Omega$
30 $^{\circ}\text{C}$	43	$\text{k}\Omega$
40 $^{\circ}\text{C}$	28	$\text{k}\Omega$
50 $^{\circ}\text{C}$	19	$\text{k}\Omega$
60 $^{\circ}\text{C}$	13	$\text{k}\Omega$
70 $^{\circ}\text{C}$	9	$\text{k}\Omega$
80 $^{\circ}\text{C}$	6	$\text{k}\Omega$
85 $^{\circ}\text{C}$	5	$\text{k}\Omega$

Regeneration

Volume	300	cm^3
Position 0 after wash cycles	10	
water hardness	0-60	$^{\circ}\text{dh}$
	0-10.7	mmol/l
	0-107	$^{\circ}\text{Fh}$
Salt consumption for regeneration	77	g
Number of cycles with 2 kg salt	26

Only sensor programs
d : drain out depends on soil level
f : water fill if (d) water was drained out before
h : heating up to 40°C till 70°C depends on soil level
r : rinsing time 0 min. fill 12 min. depends on soil level
Sensor failure are indicated only in the active test program

Text/Legend

Test procedure for SERVICE-TEST-PROGRAM DOLPHIN dishwashers (Global)

1. Start the passive test program.
If there is a defective component indicated, open the plinth and take out the control board (CB).
2. Check the component.
Unplug the indicated component from the control board (CB) and check it by using an Ohm-measure equipment.
If the ohms are not correct, check the cables to the component and check the component itself.
3. Check the control board (CB).
4. Only if there is no reaction when pushing a push button or turning the rotary switch, then test the control board (CB) and the user board (UB) with the test points.
5. At the end of the repair start the appliance and delete the stored failure. After this, start the test program again to see that the failure is solved.

More details: s. following pages.

Attention:

First unplug the appliance, then set the connection clamps of the volt measurement on the test points.

Danger for short circuit. Short circuits on components can damage the control board (CB).

If electronic boards are wet, do not switch the appliance on.

For check the appliance, plug in the appliance.

Failures, which occurred during the program will store and indicate by flashing start LED.

Then start the test program without erase the failure before. The failure will indicate.

To erase the failures, you must push the start button longer than 3 seconds.

The failures

- F1 NTC break
- F2 water leakage
- F9 continuous water inlet

are checked and indicated immediately after start of the program.

Therefore these failures have to be solved before starting the active test program.

When these failures are not solved, the active test program does not run.

The electrical components get their voltage via triac from the control board (CB). For testing the volume of voltage the volt meter must be parallel to the component (the component must be connected). If the component is disconnected, then the outcomed voltage from the control board (CB) is reduced.

For appliances with no program indicator or 7-segment-display you can use for testing a display board (DB) in addition. More details : see chapter active test program.

After starting a program this program is locked. That means neither by unplugging/switching of the appliance nor by setting an other program, the first setted program can be changed. Changing of the program is only possible by pushing the start button again for longer than 3 sec.. The programs end with draining out. After that start again.

On appliances with separate On-Off button the last used program is stored. That means if the customer wants to use the same program again he has only to press the On-button and the Start-button.

Attention: On new service control boards the first service test program is without back rinsing. Dangerous for overfilling the appliance, in case the appliance is not empty. By running the test program a second time the back rinsing will be carried out as usual.

Text/Legend

Handling of failures

F0 Sensor failure

Will not indicate for the customer. The programs will finish even there is a failure. The Failure is indicated only in the active test program after 10 – 30 second's. The active test program will finish as well, even there is a failure.

If the failure in a sensor program appear, the machine will always choose the highest consumption (best cleaning result).

- None or wrong output from the sensor
- Unlogical or unreal measurement results

Reason:

- Defective electronic of the sensor
- Optoelectronic parts in the sensor defect
- Case of the sensor is very dirty
- Connection between sensor and control board (CB) interrupted

Attention: The failure code will not store.

F1. NTC break

Temperature out of the normal value (-3°C till +85°C)

- temperature inside higher than +85°C
- NTC defective
- dishwasher is frozen, less than -3°C

Fill in the appliance a cup of warm water to warm it up before you start it, if the temperature is less than -3°C

F2. water leakage

- water is in the drip tray

floaters (LS6) switches off the WW1 and the electronic switches on the DPM till WI reports empty

F3. heating system defective

Indicated after app. 11 minutes (1. check after 5 min., after that follow 2 more checks, before the failure is indicate)

- too less heating speed (lower 1,5 °C in 3 min.)
- heating (HEW) defective
- relays (RE2) on control board (CB) is defective
- NTC - resistance fluctuation
- water indicator (WI) defective (is switched off) - spray pump (SPM) is not working

F4. draining failure

drain pump starts and after 4 min. the WI detects not empty

- drain pump (DPM) defective
- siphon closed
- control board (CB) defective
- water indicator (WI) defective (is switched on)

F5. spray arm blocked (leads not to stop the appliance)

SAB sensor sends less than 10 impulses/min.

- spray arm blocked or not fixed well
- spray pump (SPM) does not work well
- SAB sensor defective

Text/Legend

- F6. water tap closed (only indicated after start of the active test program)
water valve (WV1) is switched on but flow meter (FM) sends no impulses (less than 10 imp. in 10 sec.) and the water indicator (WI) is off (empty)
- water tap closed
 - water inlet hose blocked
 - water inlet valve (WV1) defective
 - flow meter (FM) defective (leads to FM failure)
- F7. flow meter failure
water inlet valve (WV1) is switched on and the water indicator (WI) is on (full).
- flow meter (FM) sends to less impulses (less than 10 imp. in 10 sec.)
 - water tap closed
 - water inlet hose blocked
 - water inlet valve (WV1) defective
 - flow meter (FM) defective
- F8. water level failure
failure monitored during spray pump is on and the water indicator switches back more than 20 times in 2 min.
- water indicator defective (should switch on after app. 1 litre)
 - sieve blocked
 - water strongly foams
 - pot has turned off and is filled with spray water
 - no stable spray pump (SPM) working
- F9. continuous water inlet
water inlet valve (WV1) is switched off, water indicator (WI) on, flow meter (FM) sends impulses (more than 10 imp. in 10 sec.)
- water inlet valve (WV1) mechanically not closed
 - triac (CB) permanently switched on. (short circuit)

reaction: interval 30 sec. draining / 20 sec. tracing

For salt, rinse aid, zone wash valve, sieve valve failure see active test program.

- Led Flashing PS 1 till PS 4 : Program sequence LED
 ○ Led OFF

Text/Legend

With the passive test program, you can check all LED's and buttons. If there is no failure the passive test program runs normal.

Attention:

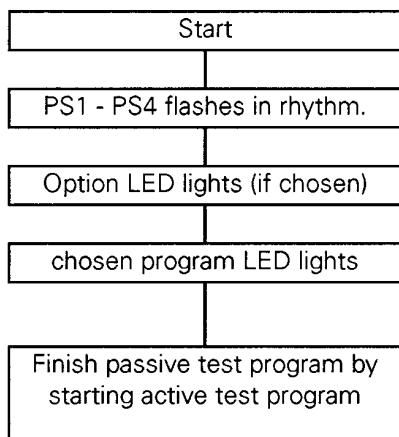

If you can't start the active test program (Start button don't flash), normally there is one of the following failures detected: F1, F2 or F9

When these failures are not solved before, the active test program will not run. After solving the failure you must "sign" (erase) the failure.

Start procedure

Passive test program

The passive test program shows the stored failure. If there is no failure the passive test program runs normal.

1. Switch off the appliance
2. Push start button and hold it.
3. Choose position 1 of the turning knob turning right side (program 1).
4. Finish pushing the start button when the start LED flashes.
5. Failure indication.
6. Repair the failure
7. Solve the failure by pushing the start button for longer than 3 sec.
8. Start the passive test program again. If there is no failure detected, test all LED's and after that choose program 1.
9. Finish the passive test program by pushing the start button for shorter than 3 sec.

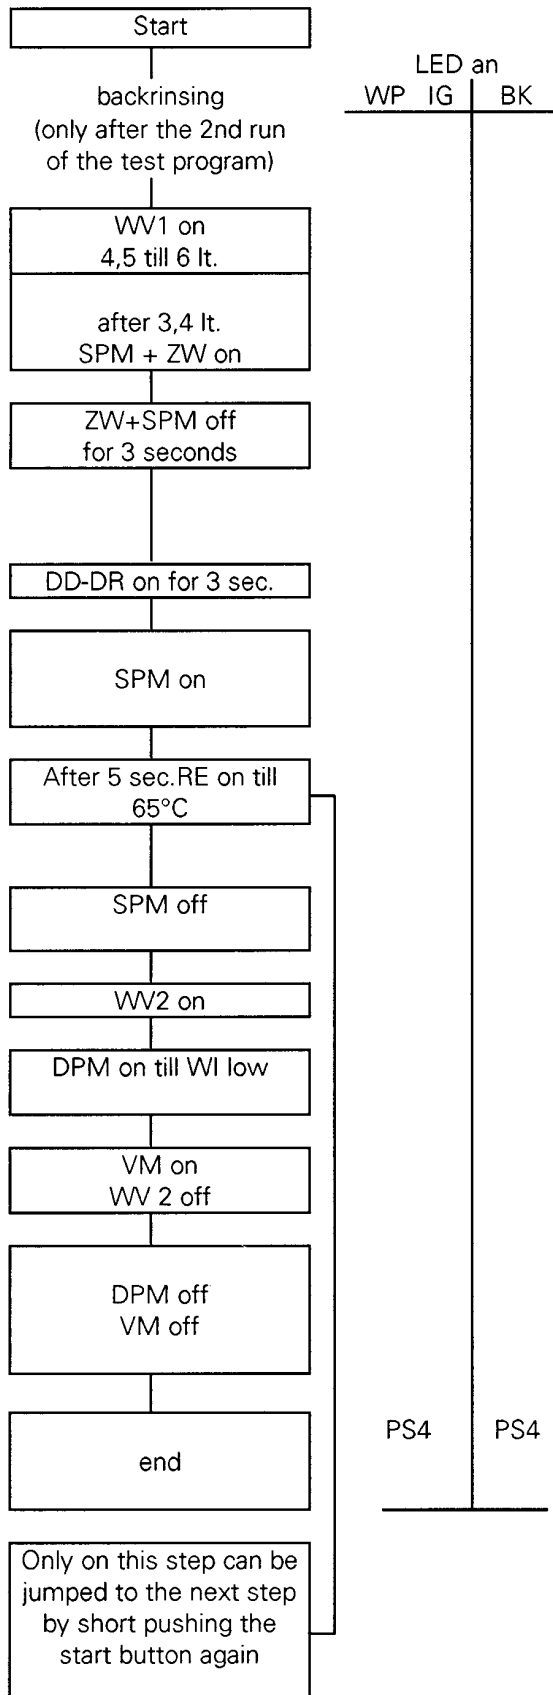

Active test program starts (see next page)

Program sequence LED

PS1	1. LED	prewash	
PS2	2. LED	mainwash	
		intermediate rinse final rinse	
PS3	3. LED	drying (regeneration)	
PS4	4. LED	end	goes off if any button is pushed
			goes off after 30 min progr. is finished

Text/Legend

Active test program

Test procedure

1. Passive test program OK?
no: repair failure, after that solve the failure and start the passive test program again.
yes: push start button shorter than 3 second's
2. Active test program starts.

Remarks

The active test program runs to the failure position and stops or, if there is no failure, to the end.

To leave the test program push the start button for longer than 3 second's.

Too less salt or too less rinse aid leads not to the stop of the appliance.

The function of the zone wash valve can only be checked optically.
A defect leads to a not stable SPM pressure.

Appliances which have no program sequence or no 7-segment-display can't exactly show the failure. On these appliances the failure can only be found by starting the test program and following this by using the program chart or by connecting an additional kit 4819 310 39782 on the user board (UB) (connector DISPL).

When the failure position is reached the flashing start LED goes out.

Attention:

If you can't start the active test program (Start button don't flash), normally there is one of the following failures detected: F1, F2 or F9

When these failures are not solved before, the active test program will not run. After solving the failure you must "sign" (erase) the failure.

Remarks:

ZW on: zone wash valve on = no water on the upper sprayarm.

ZW off: zone wash valve off = water on the upper sprayarm.

Text/Legend

Testpoints on the control board (CB)

With these test points the function of the buttons and the rotary switch can be checked.
 The test points are in the service window on the control board.
 For the test fine clamps, cables and volt meter with high input resistance are necessary.

Before setting the clamps on the test points, switch off the appliance.

Testpoints: T0: common line T2: analogue value
 T1: analogue value T3: digital signal

Check: T0 to T1

Communication between control board (CB) and display board (DB) measured over user board (UB)

pushed button	voltage	from	to
no button pushed	ca. - 5.24 V DC	Control board (CB)	Display board (DB)
ZW (1 or 2 LED)	ca. - 3.43 V DC	Display board (DB)	Control board (CB)
Delay	ca. - 2.88 V DC	Display board (DB)	Control board (CB)
ZW + Delay start	ca. - 2.88 V DC	Display board (DB)	Control board (CB)

Check: T0 to T2

Communication between Control board (CB), User board (UB)

	voltage	from	to
Programplace 1	ca. - 1.32 V DC	User board (UB)	Control board (CB)
Programplace 2	ca. - 1.75 V DC	User board (UB)	Control board (CB)
Programplace 3	ca. - 2.20 V DC	User board (UB)	Control board (CB)
Programplace 4	ca. - 2.90 V DC	User board (UB)	Control board (CB)
Programplace 5	ca. - 3.36 V DC	User board (UB)	Control board (CB)
Programplace 6	ca. - 3.80 V DC	User board (UB)	Control board (CB)
Programplace 7	ca. - 4.27 V DC	User board (UB)	Control board (CB)
start button	ca. - 0.00 V DC	User board (UB)	Control board (CB)

Check: T0 to T3:

Communication between Control board (CB) and User board (UB). Check of the 'Start' function
 Select any program.

before start (start LED off)	- 5.24 V DC
after start (start LED on)	- 3.87 V DC

How exact the data are, depends on the measure equipment.
